

BatchPress User Guide

Available for MacOS Ventura and above.

BatchPress is a companion app that works across Photoshop & InDesign to help you batch output in everyday popular formats. For example rather than having to manually output 50 indd files to PDF just let BatchPress do it*:

- Import your files
- Adjust your Settings
- Choose your output folder
- Export

**please note Adobe InDesign & Adobe Photoshop are required for BatchPress to operate, the apps must be open and running as BatchPress utilises their export engines to run successfully.*

Installation & Setup

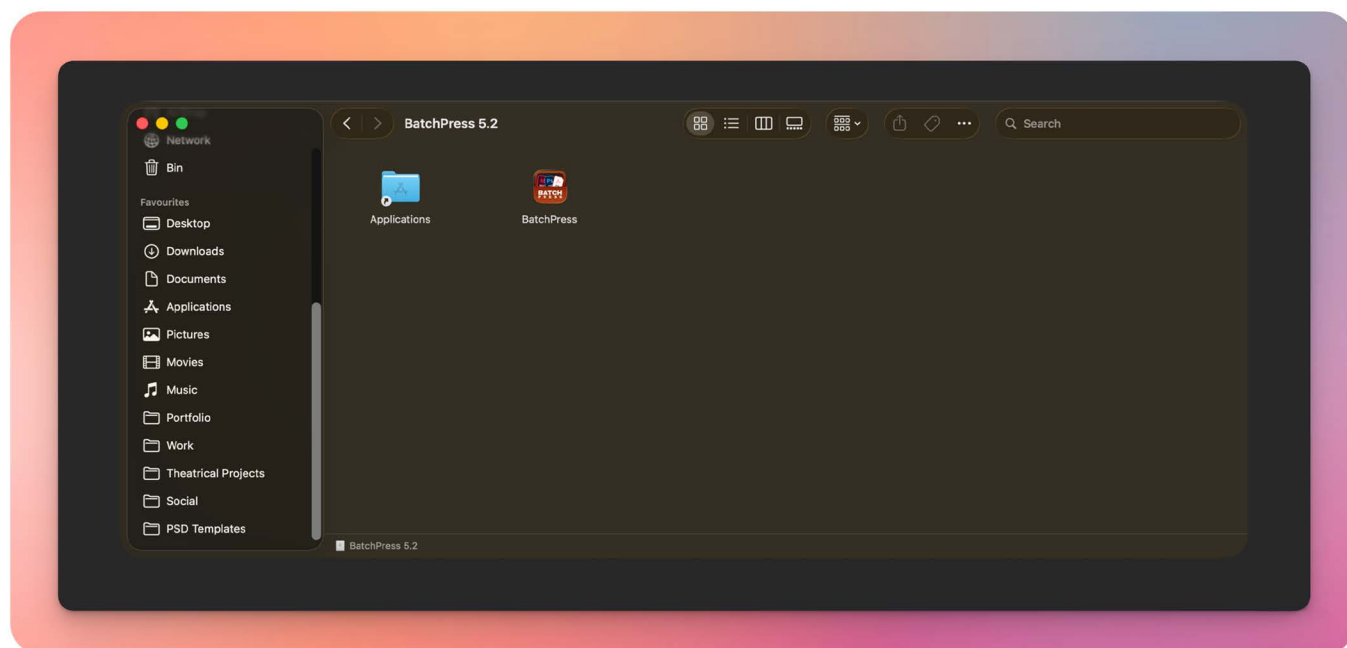

1 Download the latest DMG

Download the latest DMG file from Gumroad when you purchased your licence or download the latest release via Github.

<https://github.com/stephencreate/BatchPress/releases>

2 Open the DMG

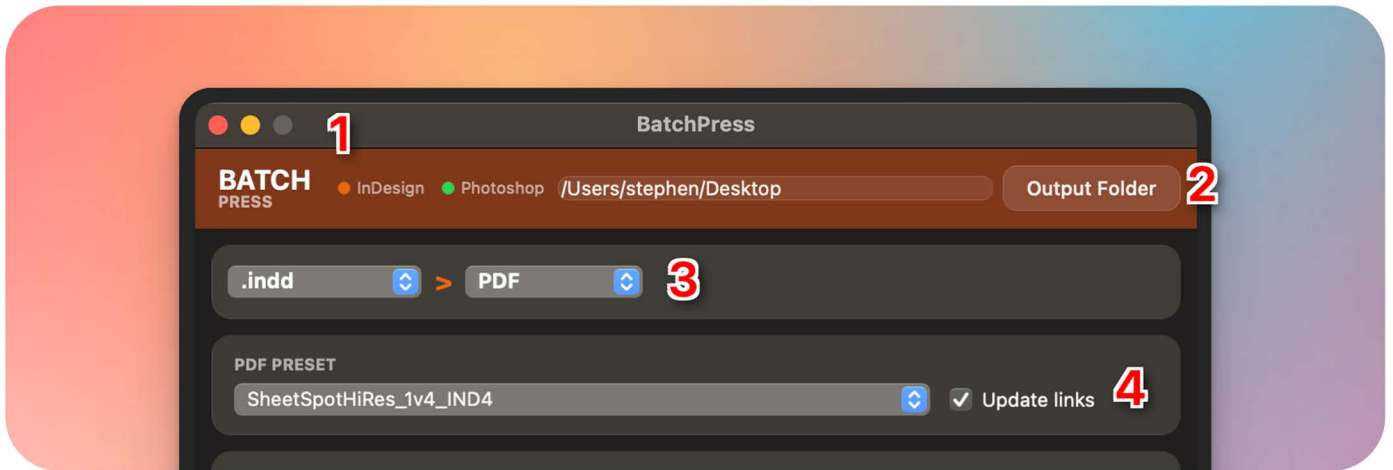

Open the DMG you just downloaded and drag the BatchPress icon into your Applications folder on your Mac.

3 You are all set!

Open BatchPress via Spotlight Search or your Applications Folder and you are now ready to export!

UI Overview

1 Software Status Indicators

These will light up orange if the associated app is closed, you can click the traffic light indicator to open or close said app and they will light up green when the app is open and ready to be used.

3 File Conversion Options

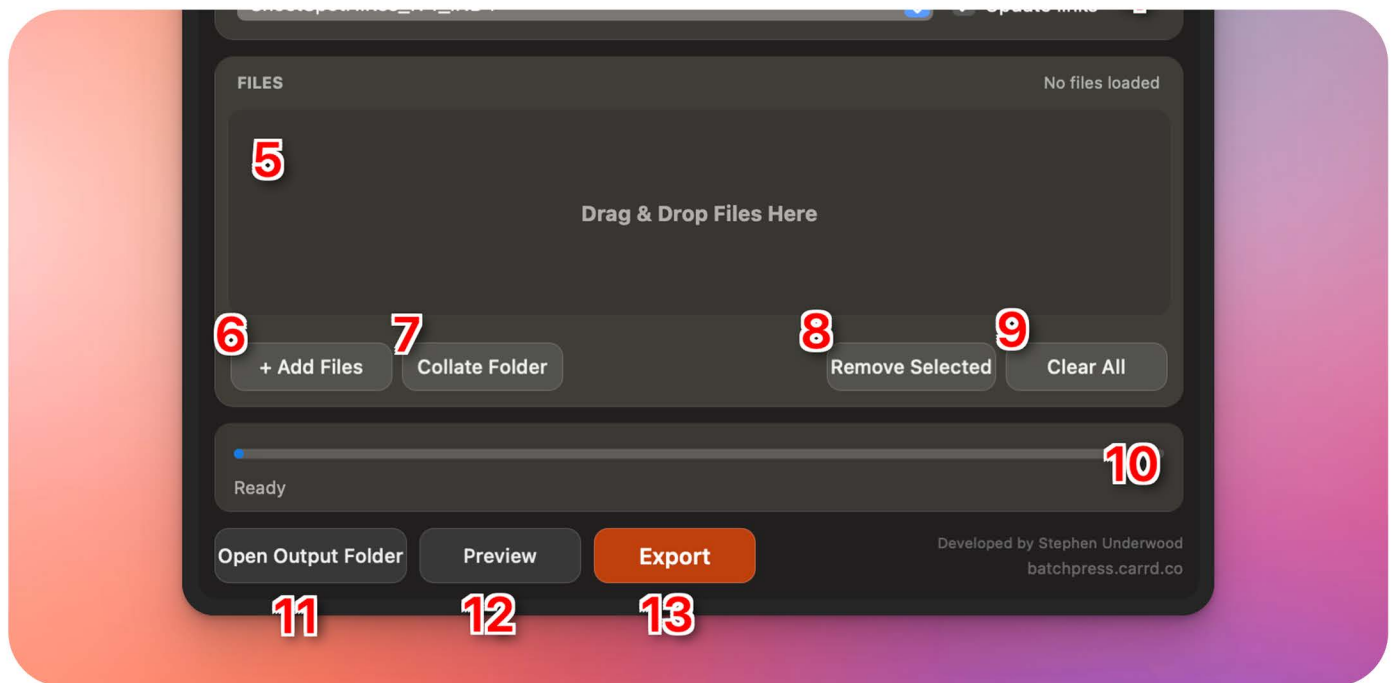

Select what files you are importing and what file format you want to save out as such as: PDF, PNG & JPEG.

2 Output Folder

Select your output folder by pressing the Output Folder button and choose where you want your batched files to save to.

4 Output Settings

This window will change depending on what outputs are selected but indicated above is the PDF preset selection which shows when converting between indd > PDF

UI Overview (cont.)

5 File List

All your imported files, will show up in this list and can be selected (they will light up orange when selected) and then can be removed individually or by selecting multiple.

7 Collate Folder

The Collate Folder button lets you scan a folder for all files of the same file type. For Example if you are converting from indd files BatchPress will know to scan the folder you select for any indd files it can find and will import all of those, this is particularly helpful for large batches of files.

9 Clear All

Clear all files in the file list and also clears any status messages, or log messages.

11 Open Output Folder

Will open the Output folder you pre-selected earlier.

13 Export

Fairly self explanatory again, the export button. It will save out any files imported into your file list into the pre-selected output folder.

6 Add Files

This button lets you manually select individual files to import into BatchPress, or you can also drag and drop your files into the File List above.

8 Remove Selected

Fairly self explanatory, you can remove any files from the file list that are lit up/clicked orange. And you can hold Cmd to select multiple files and remove any that are selected from your File List.

10 Progress Bar

Will show how the progress of the export is going.

12 Preview

Will save out the first file in your list into the Output folder to check all is correct and setup before you save a full batch.

FAQs

What is BatchPress?

BatchPress is a macOS app that lets you export multiple Adobe InDesign and Photoshop files at once without manually opening and exporting each one individually.

What file types does BatchPress support?

Input: .indd (InDesign) and .psd / .psb (Photoshop). Output: PDF, JPEG, PNG, TIFF.

Which versions of InDesign and Photoshop are supported?

2021 through 2026. BatchPress will automatically detect whichever version you have installed.

Why is my PDF preset list empty?

InDesign needs to be open for BatchPress to read your saved presets. Click the InDesign status light to launch it, wait for it to open, then your presets will load automatically.

BatchPress says InDesign is not found, what do I do?

Make sure InDesign is installed. Click the orange status light next to InDesign in the header to launch it. If the light is grey, InDesign isn't installed on your Mac.

InDesign/Photoshop opens but the export fails.

Make sure BatchPress has permission to control other apps. Go to System Settings → Privacy & Security → Automation and ensure BatchPress is allowed to control InDesign and Photoshop.

How do I activate my licence?

Go to Licence → Licence & Account in the menu bar, paste your key into the field and click Activate Licence.

How do I update BatchPress?

BatchPress checks for updates automatically when you launch it. If a new version is available you'll see a prompt. You can also check manually via Help → Check for Updates.
